

IPHH4 DATA CENTER

2027

Ready for Service

EnEFG

Compliant

12.8MW

Total IT-Load capacity
of entire building

4,198m²

Plot area

6,380m²

White space

IPHH4 IS DESIGNED FOR A PUE OF 1.2 OR LOWER

- > IPHH4, which is fully adjacent to IPHH3, will be fully integrated into the virtual campus of our data centers IPHH2 and IPHH3 and therefore be the best location to interconnect in Hamburg. With around 50 carriers and network operators, IPHH4 will be your number one interconnection hot spot - all just a standard cross connect away.
- > The data center will have a total IT load of 12.8MW, 2 infrastructures of 6.4MW each and a data center area (white space) of 6,380m², 3,190m² per building.
- > Construction work is expected to begin in the first quarter of 2025.
- > Liquid cooling is available for High Performance Computing (HPC).
